NAMIT KAPOOR

AI Product Engineer
603-277-1542 ◇ namitkpr@gmail.com ◇ linkedin.com/in/namitkapoor ◇ namit.me

SUMMARY

Generalist product engineer with a designer's product taste who owns AI-native features end to end, from the pixel to the prompt to the database schema. Co-founded ChekOut AI and took its LLM-powered agents from a contractor-built v0 to **8 shipped** client applications, with a **20**% sales lift for e-commerce clients and **$120K** in enrolled revenue for an education client.

EXPERIENCE

Product Engineer & Co-founder Aug '24 — Present
ChekOut AI New York City, NY

Own features full-stack (frontend, backend, infra): the merchant app (app.chekout.ai) in Next.js 16 and **React** 19, Python/FastAPI and Node/TypeScript services, Postgres, Docker on Cloud Run, CI/CD.

- Designed agentic UX with non-determinism as a first-class constraint: a research-led, chat-first conversational AI agent, with evals and citation checking on its answers.
- Made a new agent a database row, not a deployment: one Langflow flow (the workflow builder behind every agent) reads each merchant's config at request time.
- Rebuilt retrieval from per-merchant **Vertex AI** Search to pgvector in Postgres, sending about 20 matched products to the LLM instead of the whole catalog of up to **6,000+ variants**.
- Built the agent builder and setup flow, plus a Server-Sent Events stream of provisioning progress with automatic fallback to polling.
- Built order attribution end to end: cart attributes from the widget, Shopify webhooks matched to agent sessions with no customer PII, and **React** views for revenue, AOV, and top products.
- Added a keyword and intent analytics dashboard on **BigQuery**; caught a widget bug that double-sent greetings and inflated conversation counts.
- Shipped an AI coworker for enrollment officers: it sorted leads into priority buckets, flagged nearly **2x** as many bad leads, and saved **3 hours** per officer per day; **23**% conversion (up from **10**%).
- Tuned an AI-native workflow: Claude Code and Cursor, self-authored MCP servers, and multi-agent pipelines; set AI tooling policy for the team.
- Work directly with merchants on what the product must do; personally signed 3 of **8 clients**, whose storefronts drew tens of thousands of visitors.

UX Design Intern May '23 — Aug '23
My Influency Atlanta, GA

Redesigned information architecture and status tracking with data science teams: **95**% task success across 8 core tasks, **28**% fewer clicks, and **1 min 47 sec** saved per task.

Interaction Designer Oct '21 — Jul '22
Arlene New York City, NY

Built AR for the Tapestry and Estée Lauder portfolios at Macy's, driving **$75K** per month in additional revenue for Arlene and a **20**% in-store engagement lift at Macy's.

PROJECTS

Kyuri — kyuri.namit.me '26

- Multi-user workflow automation platform in Next.js 16, **React** 19, and TypeScript with OAuth, stage-history tracking, and Notion, Gmail, and GitHub integrations.
- Agentic workflows that tailor documents with LLMs, then grade each output with a deterministic scorer; Vitest and Playwright suites.

EDUCATION

M.S. in Human-Computer Interaction, Georgia Institute of Technology Aug '22 — May '24
Atlanta, GA

B.A. in Interdisciplinary Digital Studies, Dartmouth College Sep '17 — Jun '21
Hanover, NH

SKILLS

AI LLMs, agentic workflows, conversational AI, RAG, evals, Langflow, pgvector, Vertex AI, MCP servers, multi-agent pipelines, Claude Code, Cursor, n8n

Engineering TypeScript, Python, React 19, Next.js 16, FastAPI, Node.js, PostgreSQL, BigQuery, Docker, Cloud Run, GCP, CI/CD, Server-Sent Events, Vitest, Playwright

Design Figma, Design Systems, Interaction Design, usability testing, WCAG accessibility
